Apps from K15t Software help teams work better together in Confluence and Jira.

Over 5000 organizations around the world use K15t Software’s apps to enhance and expand the project collaboration and content management capabilities of their Atlassian tools.
Backbone
ISSUE SYNC FOR JIRA

Synchronize Jira issue data across departmental and B2B borders with flexibility and security for seamless inter-team collaboration.

for Jira Server and Cloud

ON THE SAME PAGE
Bridge the information gap by working on identical Jira issues at the same time, between any Jira project – all without tedious workarounds. Open up new worlds of collaborative possibilities with automated Jira issue synchronization.

COMPLETE CONTROL
Work on your Jira projects your way, with settings for issue, field, comment, attachment, and workflow mapping. Backbone also offers total control over your privacy and security to give you the confidence and peace of mind your business requires.

WORKFLOWS WITHOUT BORDERS
Partners can keep their preferred workflows in place – inside or outside of Jira. Workflow mapping definition gives you the power to clearly specify distributed responsibilities, eliminating confusion and ambiguity.

SCROLL Viewport

Deliver Confluence content to the web simply and rapidly. Use HTML, CSS, & JavaScript to have full styling control and create beautiful, functional websites of all kinds.

for Confluence Server

CREATE VIEWPORTS FOR YOUR CONFLUENCE CONTENT
A Viewport provides an alternative view on pages or blogposts in a Confluence space. It is available at a configurable URL and uses themes to output the content.

THEME DEVELOPMENT AT ITS BEST
Scroll Viewport makes theme development a breeze, and gives 100% control to the web developers. Write templates in HTML, CSS or JavaScript, add a few simple tags, and upload to Confluence.

RESPONSIVE HELP CENTERS FROM CONFLUENCE
Confluence is an awesome solution for user help. With Scroll Viewport’s Scroll Help theme it becomes even better. The theme is easy to set up, and works on desktops, tablets, and smartphones.
SCROLL
Versions

Plan, author, manage, and release documentation directly from Confluence and keep pace with feature-rich, fast-changing products.

MANAGE MULTIPLE LANGUAGES IN ONE SPACE
Manage content and documentation in multiple languages in one space. Choose between 150 languages to globalize your content and make it available for your users.

TRANSLATE IN CONFLUENCE
Translate your content directly in Confluence. Display the original language and the target language side-by-side, and translate the content at a glance.

INTEGRATE TRANSLATION MANAGEMENT SYSTEMS
Translate your content using a Translation Management System (TMS) by creating an exchange file and sending it to your TMS. After translation, import it into Confluence with ease.

SCROLL
Translations

Maintain multiple languages in one space, and translate content in Confluence or in external translation management systems.

MULTIPLE VERSIONS
With Scroll Versions, you can author and manage multiple versions of your documentation in a single Confluence space. Add or update pages and publish the appropriate version when the product is released.

MULTIPLE VARIANTS
Manage different product variants in a single space in a simple and logical way. Space Admins can define variants on the space level, and Authors can define which content applies to which product variant.

DUPLICATE PAGE TITLES
Use duplicate page titles within a single space. Links are kept independent of page titles, allowing renaming of pages without breaking links.
GUIDANCE FOR AUTHORS INSIDE THE CONFLUENCE EDITOR

Scroll Acrolinx Connector checks Confluence content for terminology, spelling, grammar or style errors based on your guidelines. Click highlighted text inside the Confluence editor to get a suggestion, and replace it with another click.

CONTENT QUALITY INDICATOR AND SCORECARD

Each Confluence page has an Acrolinx scorecard that indicates its content quality and reports a detailed language analysis. Authors can easily see which areas they can improve and ensure they align with the company voice, style and brand terminology.

QUALITY METRICS WITH ACROLINX STATUS DASHBOARD

The status dashboard displays the Acrolinx score of all pages within a space, offering a 360-degree view of your content scores. Track page, space, and even team performance in order to determine quality and reduce content production costs.

SCROLL ImageMap

Bring Confluence images to life with multiple clickable link areas and mouseover tooltips that engage and inform your users.

for Confluence Server and Cloud

ADD MULTIPLE LINKS TO IMAGES PRECISELY AS NEEDED

Draw multiple shapes on a single Confluence image to define clickable or mouseover tooltip areas, and link them to other Confluence pages or external URLs as desired.

DRAW INTERACTIVE AREAS QUICKLY IN ANY SHAPE

Easily draw any shape you need – from simple squares and circles to complex polygons – directly on your image with the built-in editor.

CREATE ENGAGING, INFORMATIVE EXPERIENCES

Turn your static images into interactive experiences for your users in nearly limitless ways. Clickable menus, diagrams, UI mockups, and landing pages are only the beginning of the use-case possibilities.
Collaboratively manage the lifecycle of your business documents entirely in Confluence. Define a tree of Confluence pages as a document and then track changes, create versions, and export to Word, PDF, and many other formats, with styling and structure to match.

**MANAGE DOCUMENTS IN CONFLUENCE**

Powerful document management functionality in Confluence – Define a tree of pages as a Document, then track history, compare versions, and export in almost any format.

**CREATE DOCUMENTS IN CONFLUENCE**
Designate existing content or create new documents right within Confluence, making the process collaborative and transparent. Search and filter your documents, and view useful metadata at a glance.

**MANAGE DOCUMENTS IN ONE PLACE**
Find and access every document managed in a space via the index page – an overview that’s always up-to-date. Use Confluence for document management instead of expensive applications and messy file shares.

**TRACK HISTORY AND COMPARE VERSIONS**
Manage milestones and track changes by creating versions of your multi-page documents, all within a single space. Easily compare versions to see what’s changed over time, and use Confluence as your document repository.
SCROLL

PDF Exporter

Turn your Confluence pages into beautiful PDF documents with rich output functionality and full control over styling.

for Confluence Server and Cloud

---

CREATE TEMPLATES AND CONTROL TEXT STYLES

The WYSIWYG template editor makes it easy for anyone to use Scroll PDF Exporter. Customize fonts, colors, headers, footers, macros, table of contents, and more – while previewing the PDF output in real time.

---

DEFINE STYLES GLOBALLY OR AT A SPACE LEVEL

You have the freedom and flexibility to define and deploy as many different templates as your business needs require, either at an individual space level or globally throughout your Confluence system.

---

EXPORT SINGLE PAGES OR ENTIRE HIERARCHIES

Export single Confluence pages or entire page tree hierarchies to PDF at the click of a button – all with full control over the look and feel of your export.

---

SCROLL

Office

Export Confluence content to Word – happily. Turn your Confluence pages into professionally styled Microsoft Word documents.

for Confluence Server and Cloud

---

EXPORT SINGLE PAGES OR ENTIRE HIERARCHIES

Scroll Office lets you export either single Confluence pages or entire page hierarchies to Word at the click of a button.

---

SIMPLE TEMPLATES USING WORD STYLES

Scroll Office uses Word templates to output native Word documents, and automatically matches the styles in Confluence with corresponding styles defined in your Microsoft Word template.

---

CUSTOMIZE YOUR WORD STYLES

Define your own styles and customize Word elements such as a title page, table of contents, page headers and footers, and more. You can also set list and table styles to output these elements the way you want.
Create great static HTML exports of your Confluence content. Deploy content from Confluence to a webserver or embed it anywhere.

Create context-sensitive help (CHM) files for Windows applications right from Confluence with flexible, user-friendly exports.

Turn your Confluence pages into DocBook XML files for storing in a VCS or further processing with flexible, user-friendly exports.

Export content from Confluence pages to styled help files for the Eclipse platform with flexible, user-friendly exports.

Move your Confluence content to the EPUB format and make it available on mobile devices with flexible, user-friendly exports.

*SCROLL Viewport*  

"Scroll Viewport is technically the most advanced & flexible app when it comes to modifying the UI of a Confluence space. The embedded theme editor is simply awesome & reduces turnaround times to a minimum."

— Jan-Peter Rusch

---

*SCROLL Office*  

"Scroll Office is a super great plugin and I cannot imagine Confluence without it. It’s absolutely integral for anyone that needs to print out content from Confluence or communicate content to anyone outside of your own Confluence."

— Merle Fischer

---

*SCROLL Translations*  

"The Scroll Translations app is one of the most useful features for Confluence pages when professional localization is needed."

— Bastian Kippelt
